

Solution Requirements

Date	27 JUNE 2026
Team ID	XXXXXX
Project Name	Visualization Tool for Electric Vehicle Charge
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Users can securely register, log in, and reset passwords.	High
2	Authorization levels	Users can view only their data, while Admin can manage users and reports.	High

3	External interfaces	Integrates with health APIs, wearable devices, and cloud database.	Medium
4	Transactions processing	Collects user health data, calculates well-being score, and stores results.	High
5	Reporting	Generates personalized well-being reports, dashboards, and progress charts.	High
6	Business rules, etc.	Well-being score is calculated based on health, lifestyle, mental wellness, and activity data.	High
7	Compliance to laws or regulations	Protects user privacy and stores personal data securely according to data protection guidelines.	High
8	Other	Sends health tips, reminders, and personalized recommendations.	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	The system should generate results quickly.	Response time < 2 seconds
2	Scalability	The system should support many users simultaneously.	Supports 10,000+ users
3	Security & Data Privacy	User data must be encrypted and securely stored.	AES-256 encryption & secure login
4	Reliability & Availability	The system should be available most of the time.	99.9% uptime
5	Usability & Accessibility	Easy-to-use interface with responsive design.	User-friendly and mobile compatible
6	Other	Easy maintenance and future feature updates.	Modular and maintainable system
